

# CommonCollection v. 2.0

17. December 2018

# Peer-to-peer Giving platform

## Payment options

- Bitcoin
- WeMoveCoins (Bank)
- Coinbase (Bank, CreditCard)
- ... many more to be explored with local partners

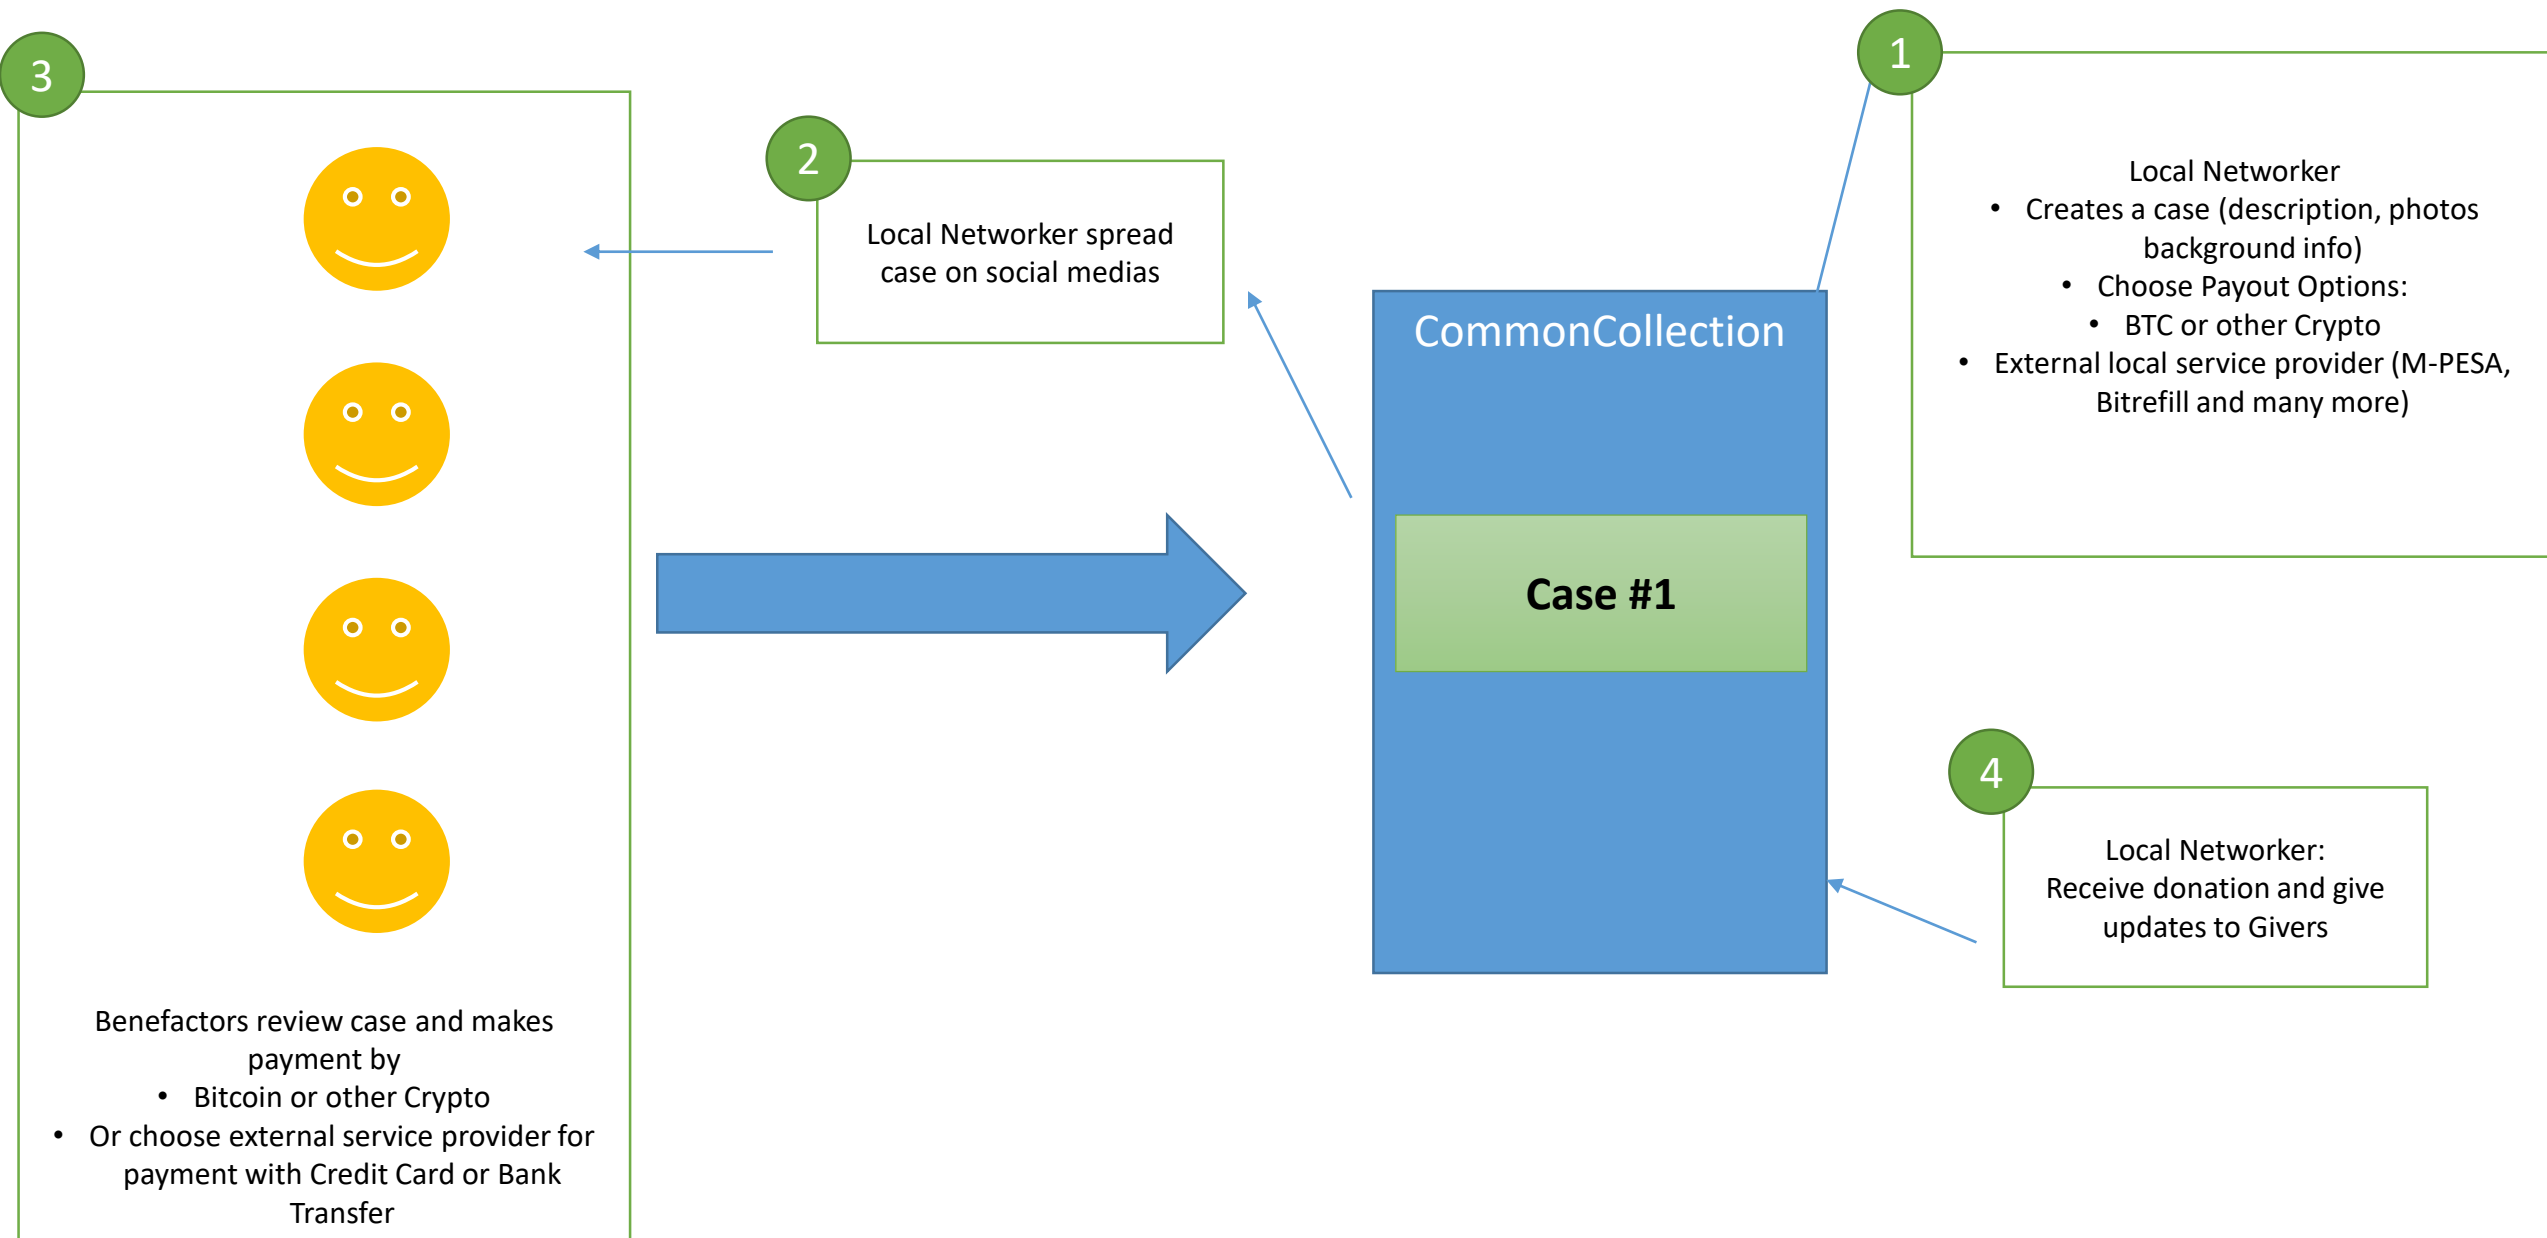

## CommonCollection - Core

- Peer-to-peer Giving (Crypto to Crypto)
  - Traceability of all transactions
    - Easy creation of cases
    - User-friendly Interface
      - White-Label ready
  - Social sharing, messaging, Likes
    - Direct chat
- Transparency powered by Chainalysis
- Performance reviews (KPI) of receivers

## Payout options

- Bitcoin
- Bitrefill
- SpectroCoin
- ... many more to be explored with local partners

# Use Case: Work-flow

# Design

## **Database design**

- We shall adapt the Order/Transaction/Account/AuditTrail structure from WMC (maybe remove some fields though)
- The User/Project structure from current version of CC can be re-used
- So in new version there will be a one-to-many relations between Order and Project

## **Case Creation (Receive address)**

- Wallet Address is given by Receiver (either personal held or address at a payout service)

## **Donation**

- CC uses BitGo for intermediary wallet and create a payment address with webhook
- On payment CC order-book is updated
- On payment the donation is automatically forwarded to Receiver Address (minus miners fee and CC-processing fee)
- Optional (Giver can choose payment processor (e.g. Coinbase) instead of BTC-payment)

# CommonCollection.com Main Features

## List of Cases
